

A compliance initiative that reduces risk and costs

Maintaining an up-to-date MSDS inventory that is easily accessible to employees across your workplace is a legislative requirement. Failure to comply with Occupational Health & Safety regulations puts an organization and its employees at risk. Yet meeting these requirements can be a labour-intensive and costly proposition when using traditional, paper-based systems. To help organizations address OH&S compliance, Levitt Training & Consulting has implemented an innovative, cost-effective e-solution tool – **Link2MSDS**.

Simplify compliance and reduce MSDS management time:

Link2MSDS is an e-service specifically designed as a cost-effective method of retrieving new MSDSs and tracking and updating expiring MSDSs. It is user-friendly so all employees can search for, view and print up-to-date MSDSs quickly and easily. The system also offers administrative features that enable automatic updating, notification, MSDS requests, reporting and data export capabilities. This frees up valuable resources that were previously dedicated to manual MSDS administration. Your entire organization benefits by implementing compliance tools, while reducing costs, risk and liability.

No hassle deployment:

Link2MSDS is a web-based service that is accessed via the Internet or Intranet. This means there is no software installation or systems upgrading required, ensuring trouble-free deployment. This e-service is provided through a secure site that is password protected for administrative functions. Extensive back-up procedures minimize any risk of service interruption.

Easy to use, yet feature-rich:

With Link2MSDS, Levitt Training & Consulting retrieves and converts all of your MSDSs into electronic documents (PDFs) to create a custom online database or Master Book, accessed through a customized interface or home page. Once the system is operational, Levitt Training & Consulting provides automatic MSDS reviewing and updating services on a regular basis – so MSDSs are **always** up-to-date.

No more searching through out-of-date binders – all employees have instant, desktop access to current MSDSs. The convenient online MSDS Master Book, automatic updating and e-mail notification save your administrator the time and effort of searching for, replacing and updating MSDS lists across the organization.

Comprehensive administrative features:

Link2MSDS offers user-driven capabilities that enable organizations to custom configure their MSDS management service to suit their global or departmental needs. This includes the ability to create multiple sub-units and sub-directories to assign, sort and track MSDS inventory across numerous departments/sites.

Let Levitt Training & Consulting link your employees to up-to-date MSDS information through Link2MSDS.
